

Please put an end to the consideration of Broadband Services over Power Lines (BPL). There is already far too much man-made noise polluting our radio spectrum and BPL will only serve to greatly compound this problem.

In times of national or local disasters, Amateur Radio is very often the only means of communications. BPL would only serve to disrupt communications through the airwaves that has always been a vital link during tornadoes, hurricanes, earthquakes and now, terrorism.

Please do not allow BPL to take down our twin towers of communications and emergency preparedness!!!
